Distributed Ledger Repo

Tokenize repo and collateral workflows. Unlock funding flexibility.

Broadridge Distributed Ledger Repo (DLR) digitizes repo and collateral workflows, allowing securities to remain at the custodian while ownership, obligations and settlement are managed in real time.

DLR is the world's largest institutional platform for settling tokenized real assets, processing approximately $8 trillion in monthly tokenized transactions and setting a new standard for efficiency and innovation in the global repo market. Across sponsored repo, intraday repo and collateral pledges, DLR helps firms optimize funding flexibility, high-quality collateral usage, and liquidity and capital management.

How DLR works

Rather than physically transferring collateral, underlying securities remain immobilized. Smart contracts manage trade terms and collateral obligations, creating a shared, real-time view of the transaction lifecycle for cash lenders and securities borrowers.

Sponsored repo

Digitize collateral for sponsored repo, reducing the need to move securities between custody accounts.

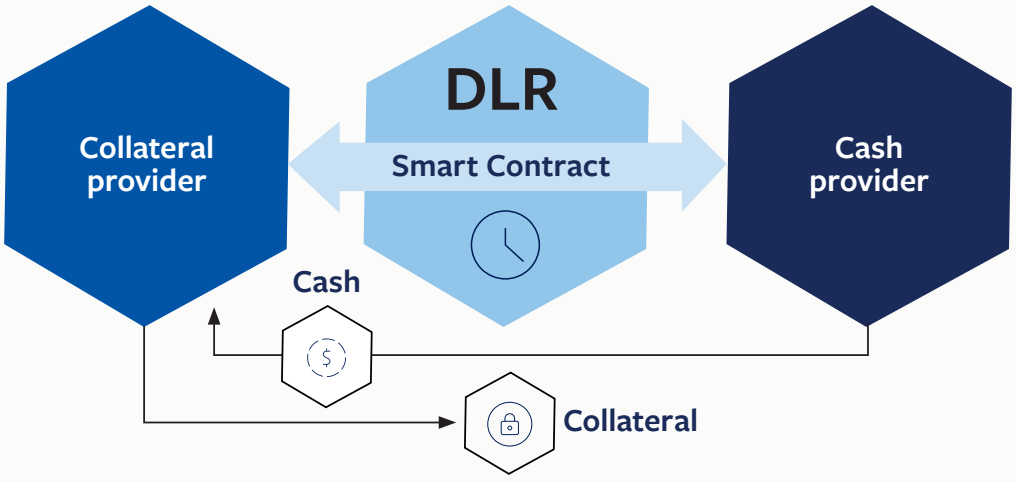
Intraday repo

Enable flexible, short-term financing so counterparties can lend and borrow cash during the trading day.

Collateral pledges

Digitize collateral pledges and movement without requiring a simultaneous cash payment.

Designed for stronger liquidity, lower operational friction and better capital efficiency across repo and collateral activity.



Securities remain at the custodian; ownership, obligations and settlement are managed in real time.

Onboard collateral → Immobilize collateral → Establish smart contracts → Manage rights → Synchronize workflows → Settle transactions

Expand what's possible with DLR

Use cases to support funding, liquidity and collateral management.

Sponsored repo

Digitize collateral for sponsored repo, reducing the need to move securities between custody accounts.

- Track collateral ownership on DLR to streamline collateral movement
- Broaden clients' access to repo market liquidity and clearing infrastructure

Intraday repo

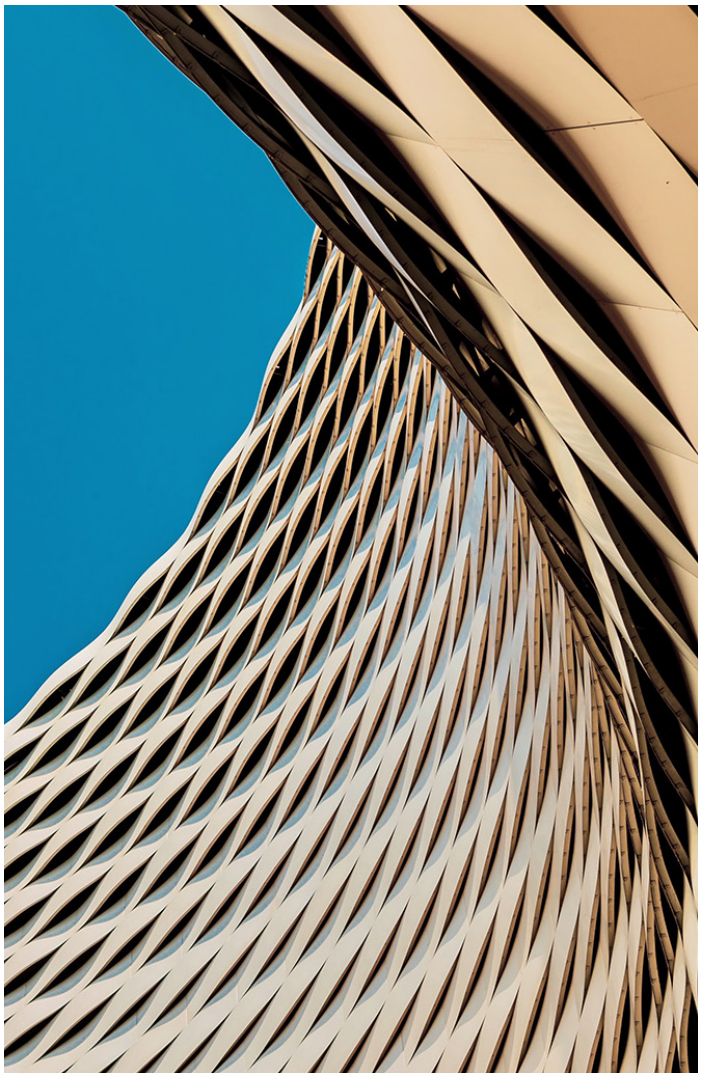
Flexible, short-term financing that enables counterparties to lend and borrow cash during the trading day.

- Collateral providers can access intraday liquidity to reduce settlement friction and liquidity buffer requirements
- Cash lenders can deploy excess cash more efficiently, investing for several hours during the day without overnight counterparty exposure

Collateral Pledges / Free of Payment (FoP)

Digitize collateral pledges and movement without requiring a simultaneous cash payment.

- Deploy tokenized assets as eligible collateral for margin, credit and secured funding obligations, including bilateral and Uncleared Margin Rules (UMR) arrangements
- Gain more efficient collateral mobility and optimize the use of high-quality collateral



Put DLR to work across your repo and collateral workflows.

Explore how Broadridge can help you expand funding flexibility, streamline collateral activity and manage liquidity in real time.
