Investment Strategy

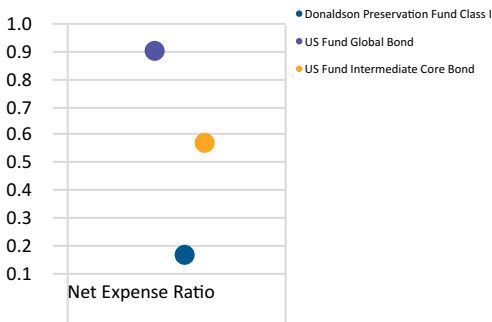

The investment objective of the Fund is safety of principal. The Fund is intended to be a portfolio for clients seeking limited volatility and a high, secure level of income. Fixed income securities, whether corporate, government, or municipal bonds, will represent the primary types of investments utilized in this style of management. The portfolio may also include preferred stocks and collateralized mortgage obligations. Selection of this management style implies both a level of risk and an assumed total return significantly less than that of common stocks in general.

Investment Philosophy

The firm's investment philosophy is characterized by three key pillars, security, income, and growth. They define safety as the preservation of capital which they accomplish by focusing on the onset of their investment selection process to find financially strong issuers. These issuers are more likely to hold their value in difficult times. They believe that during challenging environments, these financially strong issuers are more likely to have the ability to attract new capital and keep themselves strong. They generate income by purchasing high-quality bonds that come with a degree of certainty in their long-term return. They do not trade bonds to enhance total returns. Their focus on growth comes through reinvesting income into other high-quality securities.
